In *201*

Lena Yuditsky (BGU)

will talk about

### **Almost all string graphs are intersection graphs of plane convex sets**

Abstract: A *string graph* is the intersection graph of a family of continuous arcs in the plane. We prove the following structure theorem conjectured by Janson and Uzzell: The vertex set of *almost all* string graphs on  $n$  vertices can be partitioned into *five* cliques such that some pair of them is not connected by any edge ( $n \rightarrow \infty$ ). As a corollary, we obtain that *almost all* string graphs on  $n$  vertices are intersection graphs of plane convex sets.

This is a joint work with Janos Pach and Bruce Reed.
