Zemer Kosloff (The Hebrew University of Jerusalem)

will talk about

**(alpha Stable) CLT in deterministic dynamical  
systems**

Abstract: We will discuss a joint work with Dalibor Volny where we show that for every ergodic and aperiodic probability preserving transformation and  $\alpha \in (0,2)$  there exists a function whose associated time series is in the standard domain of attraction of a non-degenerate symmetric  $\alpha$ -stable distribution.
