

## The Department of Mathematics

2016–17–A term

**Course Name** Infinitesimal Calculus 3

**Course Number** 201.1.0031

**Course web page**

<https://www.math.bgu.ac.il/en/teaching/fall2016/courses/infinitesimal-calculus->

**Lecturer** Prof. Uri Onn, <urionn@bgu.ac.il>, Office 102

**Office Hours** <https://www.math.bgu.ac.il/en/teaching/hours>

### Abstract

### Requirements and grading<sup>1</sup>

### Course topics

- Basic concepts of topology of metric spaces: open and closed sets, connectedness, compactness, completeness.
- Normed spaces and inner product spaces. All norms on  $\mathbb{R}^n$  are equivalent.
- Theorem on existence of a unique fixed point for a contraction mapping on a complete metric space.
- Differentiability of a map between Euclidean spaces. Partial derivatives. Gradient. Chain rule. Multivariable Taylor expansion.
- Open mapping theorem and implicit function theorem. Lagrange multipliers. Maxima and minima problems.
- Riemann integral. Subsets of zero measure and the Lebesgue integrability criterion. Jordan content.
- Fubini theorem. Jacobian and the change of variables formula.
- Path integrals. Closed and exact forms. Green's theorem.
- Time permitting, surface integrals, Stokes's theorem, Gauss' theorem
