Course Name  Calculus 1 for engineering
Course Number  201.1.9711
Course web page  [https://www.math.bgu.ac.il/en/teaching/fall2020/courses/calculus-1-for-engineering](https://www.math.bgu.ac.il/en/teaching/fall2020/courses/calculus-1-for-engineering)
Office Hours  [https://www.math.bgu.ac.il/en/teaching/hours](https://www.math.bgu.ac.il/en/teaching/hours)

Requirements and grading

Course topics

In this course the basic concepts of one-dimensional analysis (a limit, a derivative, an integral) are introduced and explored in different applications: graphing functions, approximations, calculating areas etc.

1. Limit of a function, continuity.
2. Derivative, basic derivative formulas.
3. Derivative of an inverse function; derivative of a composite function, the chain rule; derivative of an implicit function.
4. Derivatives of high order.
5. The mean value problem theorem. Indeterminate forms and l’Hopital’s rule.
6. Rise and fall of a function; local minimal and maximal values of a function.
8. Linear approximations and differentials. Taylor’s theorem and approximations of an arbitrary order.

Information may change during the first two weeks of the term. Please consult the webpage for updates.
9. Indefinite integrals: definition and properties.

10. Integration methods: the substitution method, integration by parts.

12. Calculating areas.
