The Department of Mathematics
2020–21–A term

Course Name  Vector calculus for Electric Engineering

Course Number  201.1.9631

Course web page  https://www.math.bgu.ac.il/en/teaching/fall2021/courses/vector-calculus-for-electric-engineering

Lecturer  Dr. Izhar Oppenheim, <izharo@bgu.ac.il>, Office 316

Office Hours  https://www.math.bgu.ac.il/en/teaching/hours

Abstract

Requirements and grading

Course topics

2. Functions of several variables: open and closed sets, limits, continuity, differentiability, directional derivatives, partial derivatives, the gradient, scalar and vector fields, the chain rule, the Jacobian. Implicit differentiation and the implicit function theorem. Extremum problems in the plane and in space: the Hessian and the second derivatives test, Lagrange multipliers.

3. Line integrals in the plane and in space, definition and basic properties, work, independence from the path, connection to the gradient, conservative vector field, construction of potential functions. Applications to ODEs: exact equations and integrating factors. Line integral of second kind and arclength.

5. Parametric representation of surfaces in space, normals, the area of a parametrized surface, surface integrals including reparametrizations

6. Curl and divergence of vector fields. The theorems of Gauss and Stokes.

1Information may change during the first two weeks of the term. Please consult the webpage for updates
