

The Department of Mathematics

2017–18–B term

Course Name Homological Algebra

Course Number 201.2.2091

Course web page

https://www.math.bgu.ac.il/~amyekut/teaching/2017-18/hom-alg/course_page.html

Lecturer Prof. Amnon Yekutieli, <amyekut@bgu.ac.il>, Office 202

Office Hours <https://www.math.bgu.ac.il/en/teaching/hours>

Abstract

Requirements and grading¹

Course topics

- .1 Recalling prior material. Rings (including noncommutative), ideals, modules and bimodules, exact sequences, infinite direct sums and products, tensor products of modules and rings.
- .2 Categories and functors. Morphisms of functors, equivalences. Linear categories and linear functors. Exactness of functors.
- .3 Special modules. Projective, injective and flat modules.
- .4 Morita Theory. Equivalences of module categories realized as tensor products.
- .5 Complexes of modules. Operations on complexes, homotopies, the long exact cohomology sequence.
- .6 Resolutions. Projective, injective and flat resolutions – existence and uniqueness.
- .7 Left and right derived functors. The general theory. Tor and Ext functors.

¹Information may change during the first two weeks of the term. Please consult the webpage for updates

- .8 Applications to commutative algebra. Some local and global theorems, involving *Tor* and *Ext* functors. Derived completion and torsion functors.
- .9 Sheaf cohomology. A survey of the role of homological algebra in geometry.
- .10 Nonabelian cohomology. A survey of classification theorems: Galois cohomology, vector bundles.
