

# The Department of Mathematics

2019–20–B term

**Course Name** Integral transforms and Partial Differential Equations

**Course Number** 201.1.0291

**Course web page**

<https://www.math.bgu.ac.il/en/teaching/spring2020/courses/integral-transforms-and-partial-differential-equations>

**Lecturer** Prof. Arkady Poliakovsky, <poliakov@bgu.ac.il>, Office 314

**Office Hours** <https://www.math.bgu.ac.il/en/teaching/hours>

## Abstract

## Requirements and grading<sup>1</sup>

## Course topics

1. The Fourier transform: convolutions, the inversion formula, Plancherel's theorem, Hermite functions, tempered distributions. The Poisson summation formula. The Fourier transform in  $\mathbb{R}^n$ .
2. The Laplace transform. Connections with convolutions and the Fourier transform. Laguerre polynomials. Applications to ODE's. Uniqueness, Lerch's theorem.
3. Classification of the second order PDE: elliptic, hyperbolic and parabolic equations, examples of Laplace, Wave and Heat equations.
4. Elliptic equations: Laplace and Poisson equations, Dirichlet and Neumann boundary value problems, Poisson kernel, Green's functions, properties of harmonic functions, Maximum principle
5. Analytical methods for resolving partial differential equations: Sturm-Liouville problem and the method of separation of variables for bounded domains, applications for Laplace, Wave and Heat equations including non-homogenous

---

<sup>1</sup>Information may change during the first two weeks of the term. Please consult the webpage for updates

problems. Applications of Fourier and Laplace transforms for resolving problems in unbounded domains.
