

# The Department of Mathematics

2022–23–B term

**Course Name** Approximation Theory

**Course Number** 201.1.0121

**Course web page**

<https://www.math.bgu.ac.il/en/teaching/spring2023/courses/approximation-theory>

**Lecturer** Prof. Yair Glasner, <yairgl@bgu.ac.il>, Office 205

**Office Hours** <https://www.math.bgu.ac.il/en/teaching/hours>

## Abstract

## Requirements and grading<sup>1</sup>

## Course topics

1. Preliminaries: floating point arithmetic, round-off errors and stability. Matrix norms and the condition number of a matrix.
2. Introduction to numerical solutions for ODE's: initial value problems, Euler's method, introduction to multistep methods. Boundary value problems.
3. Numerical solution of linear equations: Gauss elimination with pivoting, LU decomposition. Iterative techniques: Jacobi, Gauss-Seidel, conjugate gradient. Least squares approximation.
4. Numerical methods for finding eigenvalues: Gershgorin circles. The power method. Stability considerations in Gram-Schmidt: Householder reflections and Givens rotations. Hessenberg and tridiagonal forms. QR decomposition and the QR algorithm.
