

The Department of Mathematics

2023–24–B term

Course Name Introduction to Algebraic Geometry

Course Number 201.1.6171

Course web page

<https://www.math.bgu.ac.il/en/teaching/spring2024/courses/introduction-to-algebraic-geometry>

Lecturer Dr. David Corwin, <corwind@bgu.ac.il>, Office 215/58

Office Hours <https://www.math.bgu.ac.il/en/teaching/hours>

Abstract

Requirements and grading¹

Course topics

- .1 Affine and projective spaces, affine and projective maps, Segre and Veronese embeddings, Desargues's Theorem, Pappus's Theorem, cross-ratio, projective duality
- .2 Plane curves: rational curves, linear systems of curves, conics and the Butterfly Theorem, Pascal's Theorem, Chasles's Theorem, the group structure on a planar cubic, Bezout's Theorem
- .3 Affine algebraic varieties: Hilbert's Basis Theorem, Zariski topology, irreducible components, Hilbert's Nullstellensatz, the correspondence between the ideals and the algebraic sets, morphisms and rational maps between affine algebraic varieties
- .4 Projective varieties: graded rings and homogeneous ideals, the projective correspondence, morphisms, blow-ups, birational equivalence and rational varieties, Grassmannians
- .5 The basics of dimension theory

¹Information may change during the first two weeks of the term. Please consult the webpage for updates

- .6 The basics of smoothness
- .7 Cubic surfaces and 27 lines. If time permits, other topics will be discussed such as abstract algebraic varieties, Chevaly's Theorem, Riemann-Roch Theorem and its applications.
