AVNER SEGAL (BAR ILAN)

will talk about

“Poles of the Standard L-function and Functorial Lifts for G_2 ” expanded, part I

ABSTRACT: This is part 1 of the speaker’s talk from last semester, expanded into a two-part series.

The functoriality conjecture is a key ingredient in the theory of automorphic forms and the Langlands program. Given two reductive groups G and H , the principle of functoriality asserts that a map $r:G^\wedge \rightarrow H^\wedge$ between their dual complex groups should naturally give rise to a map $r^*:\text{Rep}(G) \rightarrow \text{Rep}(H)$ between their automorphic representations. In this talk, I will describe the idea of functoriality, its connection to L-functions and recent work on weak functorial lifts to the exceptional group of type G_2 .
