combinatorics, in subgroups random Invariant theory representation and dynamics

חינתן על-ידי

(BGU) Glasner Yair

תקציר: Let G be a locally compact group. For example, G could be a discrete group. Let A be a closed subgroup of G . A random distribution on G is called A -invariant if it is invariant under conjugation by elements of A . In this talk, we will discuss the theory of A -invariant random distributions on G . This theory is closely related to the theory of random walks on G . We will discuss some of the recent developments in this area, including the work of Glasner and Yair.
