### packing symplectic and theory Ergodic

תינתן על-ידי

(IMPA) Verbitsky Misha

**תקציר:** The group of diffeomorphisms of the space of symplectic structures on a manifold. Given a manifold, we obtain isotopies by quotienting the action group of the Teichmüller space of symplectic structures; the action group of the Teichmüller space of symplectic structures. The finite-dimensional symplectic manifold. The action group of the Teichmüller space of symplectic structures is important to describe some of the consequences of ergodic theory, often quite important to describe some of the consequences of ergodic theory. This approach, which uses Entov. Michael
